

### Take your HP MFP to the NEXT LEVEL with easy-to-use electronic filing!

*ImageDirector™ is a complete document imaging solution that allows you to CLASSIFY, INDEX and RETRIEVE all of your documents, electronically!*

*ImageDirector combines the utility of HP's multifunction peripherals (MFP) with the efficiency of an electronic filing system, creating an easy-to-use document imaging solutions for organizations to work more efficiently.*

ImageDirector makes it simple to scan a document, apply relevant index information and archive. Users can effortlessly search for and retrieve images immediately once they have been scanned.

- “Low-Impact” Technology – Install quickly with no business disruption.
- Contributes to productivity right away – with an intuitive design.
- Easily supported by your reseller – no specialized knowledge of complex document management system is required.
- Documents are stored as standard TIFF format, so you are never locked into proprietary architectures. Supports export as PDF's and can import and store native formats.
- Image data can be stored on any network shareable UNC volume.
- The components are compatible with standard business networks and require little professional maintenance.

From the Control Panel, *ImageDirectorMFPHP* offers your choice of  *on-screen capture* or  *batch capture* capabilities.

### ImageDirector provides complete copying and archiving capabilities in an easy to use document capture-and-retrieval system.

#### Scanning

Designed for **HP's entire MFP family of products**, including CM8060/8050 Color MFPs with Edgeline Technology.

ImageDirector provides an **easy-to-use**, intuitive interface for scanning documents via **HP's embedded touchscreen front panel**.

#### File Importing

Using **Drag and Drop** functionality, users can import all their electronic files.

Files are indexed and retrievable in their **native format** (word, excel, etc.).

#### Point of Scan Indexing

The entire process is managed from an intuitive, touch-screen control panel – **no computer skills necessary!**

Documents are **indexed** and **retrievable** by user configurable criteria.

ImageDirector identifies each document scanned with index field data, entered at the **point of scan**.

Electronic filing easily configured and managed to **your specifications**.

**No separator sheets** or manual indexing required, although both are optional.

#### Archive & Retrieval

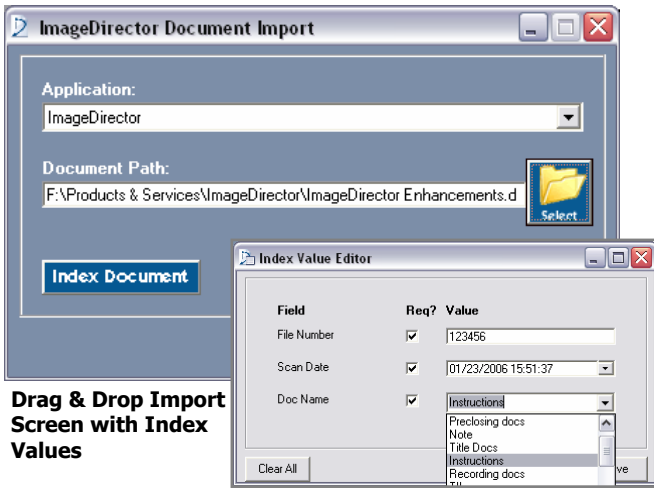

**Eliminate** manual filing and paper storage.

All documents scanned and **instantly archived** with their index identifiers for retrieval.

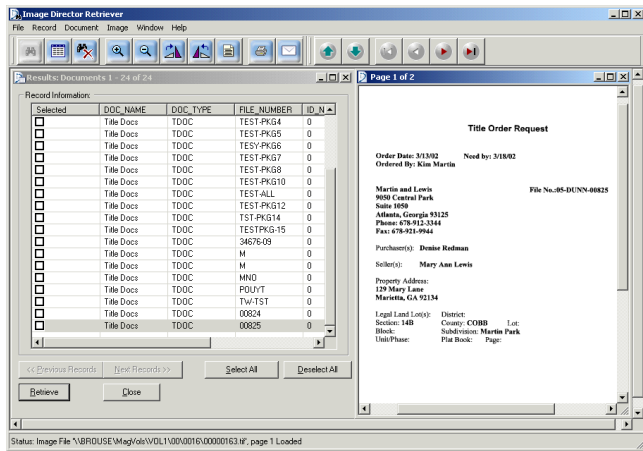

Documents are **immediately** available for retrieval and viewing through ImageDirector Retriever.

Users can **print, email, fax and export to a CD-R** in an easy “one-step” process, all from ImageDirector.

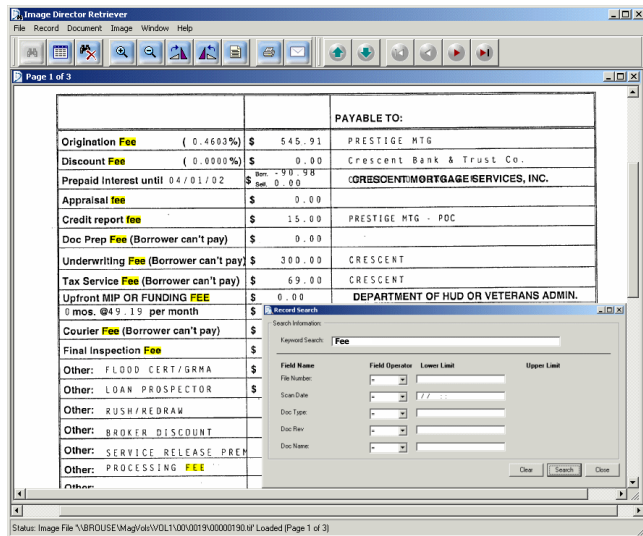

Compatible with enterprise archive systems.

**Drag & Drop Import Screen with Index Values**

**Search results with view of document.**

**Keyword search with view of highlighted results.**

## System Features.

**“Low Impact” Technology.** Installs quickly with no business disruption.

**Intuitive.** Designed so that users can use the software with minimal computer knowledge.

**Flexible.** Images are transformed automatically from their native format (TIFF) to delivery formats for display, printing, and email. This allows documents to be stored and transmitted to users, in compact formats and then rendered automatically in the most effective formats for viewing purposes, such as Adobe Portable Document Format (PDF).

**Scaleable.** Utilizing multiple applications, ImageDirector, allows you to expand how and where you apply imaging and archiving. Document Types are mapped to particular applications, so that during Capture, buttons will only show those doc types relevant to the current application.

**OCR/Keyword Retrieval.** Complete OCR processing of scanned documents with simple keyword search and retrieval.

**File Importing.** No longer will you need to print a document just to scan it into your archive system. Using *Drag & Drop* functionality, files are indexed directly from your desktop and are retrieved in their native format, (word, excel, etc).

**Print, Email, Fax and Export to a CD-R** directly from ImageDirector. Users can print, email, fax or create a CD in an easy “one-step” process.

**Web-based Retrieval.** ImageDirector provides web-based retrieval of documents.

**Security.** Administrators set user permissions based on individual applications. Thus providing an additional level of security for every application.

## System Requirements.

- HP multifunction product
- PC with Pentium IV processor, 1 GB Memory and CD-Rom Drive
- 80 GB Hard Drive (mirrored drives recommended for redundancy)
- Web Clients require Windows Internet Explorer 6.

## Technical Specifications.

- Windows Server 2003 or Windows XP Pro, Service Pack 2
- Internet Information Services (IIS) 5.1 or 6.0 (for web-based retrieval)
- Includes MSDE database engine upgradeable to SQL Enterprise
- Documents can be emailed by any MAPI or SMTP product.
- Compatible with industry standard archive systems.
