

Streamlines Enrollment Processing Services Department

- Provide centralized document and data capture solution to substantially reduce each college's paper reliance during and after the enrollment process.
- Provide easy-to-use workflow queues for each college to monitor, track and more efficiently enroll students using electronic images instead of paper — building student services' value.
- Offer automated tracking of orphan documents that arrive before the students' applications.
- Provide university-wide access to enrollment-related information via a standard Web browser.
- Reduce the number of mis-filed/lost documents and speed enrollments.

Nova Southeastern University in Fort Lauderdale, Fla. is implemented a centralized mailroom and Enrollment Processing Services (EPS) department from Comsquared Systems.

The goal of the solution is to provide a centralized document and data capture solution that will reduce the university's reliance on paper during the enrollment process.

Before, NSU was spending a lot of time and money storing and filing paper copies of students' enrollment forms. But once the automated enrollment process officially starts at the end of June 2003, NSU will start to enjoy a reduction in paper forms, a smoother enrollment process and more efficient transactions.

"We're excited to help NSU further automate their enrollment process, especially the addition of rules based workflow and the process automation it provides" said Robbie Haverstick, executive vice president of Comsquared Systems.

Nova expects a significant cost reduction in the enrollment process as a result of the new technology.

Among the Comsquared solutions that will help NSU accomplish their automated enrollment process are: *UNIsearch/XL* Content Management, *UNIsearch* Process Optimizer workflow applications, and tailored integration into NSU's core systems.
