

UNISearch® AUTOMATED DIGITAL DOCUMENT ARCHIVING FOR THE FINANCIAL SERVICES INDUSTRY

**E-MAIL, CORRESPONDENCE,
NSCC REPORTS,
FAXES, INVOICES,
STATEMENTS,
E-FORMS, 1099's**

The Right Solution for Your Document Archive Needs

Your financial services company has to contend with a massive volume of documents. They come in the form of reports, prospectus offerings, statements, correspondence, checks, confirmations, 1099's and the list goes on. Furthermore, there are SEC retention requirements that must be followed. What is the result? Your company is faced with a paper storage nightmare that must be dealt with!

UNISearch® Automated Digital Document Archiving from Comsquared Systems provides the industry proven solution you need to affordably capture, store, distribute and access this important information. By adding Internet or intranet access with Comsquared's NETSearch® and UNISearch XL®, a world of opportunities opens up to provide improved service, both to your internal organization and your most important users..... **YOUR CUSTOMERS!**

We deliver these capabilities by providing highly scalable, enterprise wide content solutions for transforming computer reports, statements and a host of different documents into easy to access online images, regardless of document format. And we've been doing it since 1984.

Automated Report and Document Capture & Processing.

UNISearch is a total turn-key solution designed to integrate with your existing host systems to automatically capture, index, store, distribute and access all of your important reports (including NSCC reports), statements and many other documents. Whether you are storing these now on expensive DASD, a failing COLD system, on microfiche or on paper, you will be amazed at the efficiencies you will gain from using UNISearch! And the processes are all automated, including the distribution of documents for CD-ROM where required.

High Volume Is Our Specialty.

The UNISearch software is designed to operate on scalable platforms. We match the platform to your volume requirements and the required number of concurrent users. Our indexing routines are the most efficient in the industry. So whether you process 500 MB or 50 GB of report or document data per day, or your user base is 50 or 5000, UNISearch is up to the task.

Faster Access to More Information.

By providing access to your internal users over your LAN/WAN, and your external customers over the Internet, you can significantly improve customer service. Self-service is what users demand today, and you can deliver it with UNISearch. Full-featured 32 bit clients, Doc-Link® image enabling clients, browser based clients (Microsoft and Netscape) and web based active content linking features are simple to use and fast, regardless of the amount of data stored on the system.

Tight Security is Built In.

You are in total control of which users see what data or documents. Even reports that contain information on multiple departments, for example, can be secured by a specific department to allow multiple department access to the same report with complete confidentiality! This gives you the confidence you need to allow access to reports and documents by a wide variety of user types without compromising security.

Virtual Customer Folders.

UNISearch can combine documents from a variety of sources and formats into one virtual electronic file folder. Documents such as pages from a computer report, statements, order confirmations, checks, scanned correspondence, faxes, and formats like ASCII, TIFF, GIF, JPEG, PCL, PDF, HTML and XML are easily handled by UNISearch.
