

UNISearch® AUTOMATED IMAGING FOR THE FREIGHT AND LOGISTICS INDUSTRY

The Right Solution for Your Industry

Your company operates on razor thin margins. So the last thing you need is sluggish cash flow, unnecessary overhead, or disgruntled customers.

UNISearch Automated Imaging from Comsquared Systems provides the industry-proven solution you need to affordably speed processing, improve cash flow, and enhance customer service. We deliver these advantages by providing a highly scaleable, enterprise-wide content solution for transforming paper documents into easy-to-access online images.

Integrate Your Billing and Tracking Systems.

UNISearch is a total solution designed to integrate with your existing billing and tracking software, regardless of hardware platform. After implementation, your systems are able to share and transfer data and improve the real time accuracy of information. UNISearch even alerts your billing system when freight is delivered, so you can bill more quickly. Many customers report a 5 to 12 day reduction in daily sales outstanding (DSO) after implementing UNISearch.

Speed Document Capture From all Locations.

UNISearch simplifies processing of bills of lading, proofs-of-delivery (PODs) and other supporting documents. Instead of company mail or expensive overnight services, your remote terminals are able to transmit paperwork to headquarters by scanning via your wide area network or fax.

UNISearch identifies scanned or faxed freight paperwork automatically with a unique bar code. Industry-standard bar coding eliminates paper filing and labor-intensive indexing. The clerical effort required at each terminal and your home office is reduced dramatically. As soon as documents are captured, they are available for viewing, printing, or faxing at all locations—and at your Web site!

Integrate With Your Web Site.

UNISearch easily integrates with your Web server and enables your customers to view their bills of lading and PODs on-line. This functionality allows customers, agents, and affiliates to track their own freight 24/7 without tying up your service staff. Comsquared users find that their customers actually prefer self-service via the Web to making long distance phone calls to customer service. With less of your resources dedicated to customer calls, you are in a better position to grow your business without increasing your staff count.

Internet document access also enhances your company's image and provides a competitive advantage for sales and marketing. (Our in-house experts can provide Web development or integration if you don't have a Web presence or technical resources!)

Get Bills Out Faster.

UNISearch's automated Print 'n' Mail module trims unnecessary expense even further by allowing you to electronically assemble, match and print Statements, Invoices and supporting documents as part of a single operation. Statements and Invoices are electronically downloaded directly from your billing system, automatically matched with supporting documents (BOL, POD, etc.), and then printed. All output is individually tailored to each customer's exact requirements!

This Print 'n' Mail feature allows same day or next day billing on delivered shipments, significantly improving cash flow and totally eliminating the time and effort required for your laborious and time consuming manual sorting, copying, matching and billing process.
